Ms Nuno, Chemistry-1

Chemistry Class

Day one of school we walked into the lab
For a chemistry class- could this be bad?
Last year was Bio and Anatomy for some
Now its ions and structures of an atom,
And matter and solids and liquids and gas
What will we do, I hope we all pass!
Ms Nuno, our teacher assured us that it
Would be so much fun and never to quit

When there are eighty more elements that we need to learn

For a quiz the next day, but don't be concerned
For we'll also be learning the element basics
Like Au is expensive and Hg makes you sick
And Cl is the stuff that keeps clean the pool
And Fe is the metal they use in some tools.

That wasn't too bad, but little did I know,
The next thing was Math- to solve the unknown!

Then nomenclature and atomic ions and more,
Then percent compounds, who knows what's in store!

Now half the semester's over and now we all see

Just how much fun Ms Nuno's chemistry can be!
