

Molly Lasater
Chemistry, period 7

The Electron

I circle around the nucleus
Everyday, every hour, every minute every second
And even every nano second.
I circle around the nucleus in a ring
With my other fellow electrons
See I am an electron
And I am quite eccentric
I have the power to make an atom positive,
By leaving it for another atom.
I've made good friends with my buddy the proton.
We go together like peas and carrots
And neutralize the atom.
We work together as a team,
This is why I might leave an atom sometimes.
I am friends with the neutrons too,
But they aren't as fun or cool as the protons
They can't leave atom like me, or have an electrical charge.
I am an electron, and I a bit eccentric
But I am the most interesting particle to study in the world of chemistry!
