CHEMISRTY CHEMISTRY CHEMISTRY

Chemistry is much different from other classes we've taken,

Each lab and graph makes us feel quite shaken.

Thank God we have Ms. Nuño who is O' so wise

Did we mention she deserves the noble prize

She's trying to make our IQ's a bit higher,

By teaching us how water molecules transpire.

Did you know mercury can cause nervous system disorders?

Or that nickel is what makes up our dimes and quarters?

Many great theories were made by Dalton, Newton, and Epicurus

And more than one debated the structure of a nucleus.

Two molecules of oxygen make oxygen gas joined by fate

While iron, carbon, and oxygen eventually form iron carbonate.

Chemistry's the study of matter and the changes it undergoes,

Let's hope that smoothly is how the year flows.

Hopefully I won't be receiving anymore Zeros.

Chemistry, Chemistry, Chemistry, why are you such an annoyance to me? The equations, the labs, the tests!

I'm surprised they don't call the class of pest!

I'm sick of the homework, I'm sick of the calculations,

My head is going to blow up with all this frustration!
I come home at night and open my book
I stare at the homework problems with a blank look.
I hear the voice of Ms. Nuño " Polyatomic Ions are near"
I sit in my desk and cringe in fear.
Rutherford discovered the nucleus with his gold foil,
If it were 1911 I would tell him to throw it into the soil!
We soon moved on to isotopes
I was relieved, it was my only hope!
They have more neutrons than protons,
This makes them more complicated than ionic bonds!
They told me if I wanted to be a surgeon
I'd have to learn how to do a conversion.
100 centimeters in a meter, 10 deci grams in a gram
My head is filled with so many numbers, I have a brain cram!
The atomic mass of an element is its AMU
Bohrium has a heavy one, its 262!
If I could drop one class, chemistry it would be
My life would be less stressful and I'd feel as if I were free.
I woke up in bed, it was all dream
Chemistry is nothing, . . . Infact
It's peaches and cream!
