

Double, Double toil and trouble

Chemicals mix and solutions bubble,

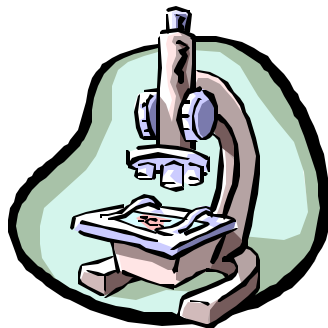

Compounds and mixtures and solutions

Even things that add to our everyday pollution

Are all made of elements, the stuff of life

The utensils you eat with, even a butter knife

Helium, Argon, Nickel and Hydrogen

Bromine, Sodium, Magnesium and Nitrogen

These great elements that left to our imagination

Can lead to new things undiscovered by our nation

These great and wonderful things so vital to our living
Is something great to research, one would have a lot of fun giving
Time and research to find new ways
To use these chemicals to the best that they may
To find the cure for cancer or diseases
And win a Nobel Prize and be labeled as a genius
Do something productive, maybe to help mankind
You'll be known throughout the land and someone who can manage their time
And be greatly respected and greatly loved
Just remember: Have fun!
