

Those Awesome Atoms!!

How cool are those atoms,
With their electrical charge?

They're teeny, they're tiny,
They're really not large.

They're the smallest of matter,
I'm telling no lie.

But for their specialest parts
Look in their nuclei.

There are three different parts,
Plus loads of empty space

But they're easy to learn,
Since they all have their place.

First is the proton,
He's one positive fellow

With a plus by his name,
And a big friendly hello.

There's also Mr. Electron.
He's a pessimistic lad.

With a negative attitude,
He's just very sad.

Then there's Ms. in between,
A neutron by name.

She's got no opinion
She's one neutral dame.

If you can remember these three,
Why then, son of a gun!

You'll ace Ms. Nuño's class,
Cuz Chemistry is fun!!
