

# Periodic Web Project

**Purpose:** To develop a set of web resources about a particular element

**Procedure:**

- get element name from teacher
- go to <http://www.kn.pacbell.com/wired/fil/>
  - follow instructions for setting up a hotlist
  - print out id and password page
  - tell teacher your id and password
  - send teacher the URL of the hotlist
- find **12** websites associated with your element
  - evaluate website to determine its reliability and value
  - follow instructions on Filamentality for adding links
  - write a 3~5 sentence description of what the site is and what information can be found at the site
  - organize sites
- put basic information about the element in the introduction to the hotlist
  - use HTML to create the bullets
  - atomic number, atomic mass, etc
  - physical characteristics
  - chemical properties
  - toxicity
  - uses
  - manufacturing and or production
  - history/discovery etc
  - interesting aspects of the element
